

# Austik Fact Sheet

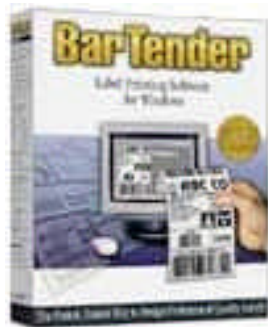

## Bar Code Software **Bartender Std**

Bartender© is simply the best design package for bar coding. This unique program runs all Austik Label Templates and allows for effortless printing of all common bar code symbologies.

The unique ODBC capabilities of Bartender allow this program to look up data from any ODBC compliant data source such as Ms Access©, Ms Excel©, Filemaker Pro©, Oracle©, dBase©, etc.

If your data is not ODBC compliant, Bartender can look up almost any exported text file that you can create. Once connected you can easily create print lists, look up single items to print, or use custom data input forms.

Bartender works with almost any printer and combined with Austik label templates and professional support, your customers will be amazed at how quickly they can implement bar coding.
