

Austik Fact Sheet

Thermal Transfer Labels Austik Barco Series

Barco Series are the ultimate in high durability Jewelry Labels. Austik have developed what is probably the most durable Polyester top coat available in the World today. This coating is a clear formulation that seals the Polyester surface and provides the extreme durability regardless of your brand of printer. You can rest assured that these labels are the result of the most rigorous testing imaginable, including 10 hours of ultra-sonic washing, skin acid tests and high abrasive scratch testing. Austik invite you to test these labels against any of our competitors. Simply drop an Austik sample label into your ultra-sonic bath along with any other sample label and compare the difference. Our research indicates that each hour of successful washing equates to around 1 year of shop life in an average traffic area of your shop.

Not only do Austik Barco Series last longer...they look better for longer. Our labels will sit comfortably next to your finest Jewelry. Even after years of use these tags will look like they were printed yesterday. After all, what would you think of a worn and sub standard tag attached to a fine Jewelry piece. Austik will never guarantee to bring you the cheapest tag possible but we do guarantee the finest quality with a price below any comparable label.

Austik Barco Series labels are available to suit many popular Thermal Transfer Printers. For optimum results, always use Barco Series in conjunction with Austik Barco Series Ribbons. The print quality of White Barco Series tags used in conjunction with Xtreme thermal ribbon is guaranteed for 10 years of average use. Due to the metallic content of Barco-22 in Gold and Silver, these tags are guaranteed for 3 years of average use.

Austik Fact Sheet

Thermal Transfer Labels Austik Barco Series

Barco Bag Series are designed specifically for high volume Jewelers, or Jewelers who label at head office and then ship to their stores in plastic bags. Simply attach the rectangular label to your bag and immediately ship your goods. The label stays on the outside of the bag and is easier to scan. Once the item is ready for display, simply peel the Barco-2I Stringtag from inside the rectangle and attach.

This system is working effectively in multi store outlets that do not have all of their stock displayed. Counting of inventory is much faster as the label is not hidden inside a plastic bag. The Head Office does not need to employ additional staff to tag individual items. Instead the local store attaches the tag during quiet trading times and only once it is needed for display.

If you need a Label System for large volumes with minimal labor costs, you can't afford not to consider using Austik Barco Bag Series. You get all of the durability of standard Barco Series labels with the added advantage of fast application times..

BARCO-2IPB Bag Tags 3,300 Labels Per Pack in Rolls | Labels Across

Adhesive Free Center Sections
Washable in Ultra-Sonics

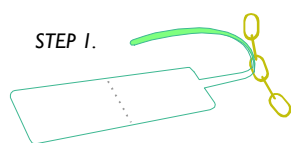

How It Works

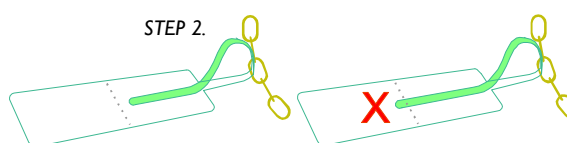

The Labels are printed and the whole rectangular is adhered to the bag. This reduces the application time at your Head Office.

Once the goods are received by the local store the stringtag shape can be removed from the rectangle and attached to the Jewelry item. The inner label is only removed and attached if the item is to be displayed.

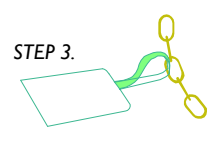

Barco-2IPB Samples printed with Austik Sapphire-300 Printer.

Thread tail through or around object

Stick tail to head. It must be located 2mm or more BEFORE center perforation

Fold head over tail and push heads together FIRMLY
